

Federated Hermes Government Obligations Tax-Managed Fund

1st Quarter 2024

Automated Shares

All information is as of 3/31/24 unless otherwise noted.

Investor Goal

Pursues current income consistent with stability of principal and liquidity.

Fund Features

- ✦ Invests primarily in short-term U.S. Treasury and government agency securities that pay interest exempt from state personal income tax.
- ✦ Does not invest in repurchase agreements.
- ✦ Holds AAAm and Aaa-mf ratings from S&P Global Ratings and Moody's, respectively.
- ✦ Income may be exempt from state income taxes, depending on individual state tax laws.

Fund Performance

Yield History (%) 7-day

Net yields are based on the average daily income dividend and average net asset value for the 7 days ended on the date of calculation.

Net Yields (%)	7-day
Federated Hermes Government Obligations Tax-Managed Fund	4.83

Total Returns (%)	1-year
Federated Hermes Government Obligations Tax-Managed Fund	4.84

Annualized Yields (%)	Apr	May	Jun	Jul	Aug	Sept	Oct	Nov	Dec	Jan	Feb	Mar
	7-day	4.27	4.50	4.62	4.73	4.82	4.86	4.87	4.89	4.88	4.86	4.81

Although not contractually obligated to do so, the adviser and/or certain fund service providers waived all or a portion of their fees or reimbursed the fund for certain operating expenses. These voluntary waivers and reimbursements may be modified or terminated at any time. The rate at which expenses are accrued during the fiscal year may not be constant and, at any particular point, may be greater or less than the stated average percentage reflected in the fund's expense table in its prospectus. These waivers increase income to the fund and result in a higher return to investors.

Otherwise, the 7-day yield would have been 4.83% and total return would have been lower.

Total return represents the change in value of an investment after reinvesting all income and capital gains.

Yield quotations more closely reflect the current earnings of the fund than the total return quotation.

Prior to April 2, 2024, Rule 2a-7 required that money market funds maintain at least 10% daily liquidity assets and at least 30% weekly liquidity assets. Effective April 2, 2024, the daily and weekly liquid assets thresholds increased to 25% and 50%, respectively. Both requirements are "point of purchase" requirements. Thus, it is possible that money market funds may, at any given time, have liquidity percentages reflecting less than the daily and weekly liquidity asset thresholds. In such circumstances, the portfolio manager will be required to purchase securities to meet the requisite liquidity thresholds prior to purchasing longer-dated securities. Additionally, the SEC requirements for what may be defined as "daily" and "weekly" differs from the standard maturities used in calculating the "Effective Maturity Schedule." Therefore, the percentages in the 2a-7 Liquidity table will generally not equal the amounts shown in the "Effective Maturity Schedule."

*G*reatly exaggerated in late 2023, the report of the death of “higher for longer” interest rates turned out to be mistaken in the first quarter of 2024.

Going into the quarter, the markets resisted Federal Reserve expectations for the pace and timing of easing monetary policy. The rate forecast “dot plot” in the December Summary of Economic Projections (SEP) indicated three quarter-point cuts could come later this year; the futures markets called for as many as seven, starting in March. No amount of communications from Fed officials dented this investor enthusiasm, including speeches and appearances by Chair Jerome Powell. But measures of consumer and producer inflation, which had been declining, began to level off and even reverse course slightly, the exuberance faded and markets fell in line. By the time of the Federal Open Market Committee’s mid-March meeting, out of which the updated SEP again indicated a likely 75 basis-points worth of cuts in 2024, the markets had conceded. Policymakers kept the target federal funds range at 5.25-5.5% throughout the quarter.

Other factors contributed to the shift in sentiment. One was sentiment itself, as consumers displayed confidence and continued to spend despite the inflation, especially food prices. Economists’ opinions on the reasons varied, but most agreed that the robust employment situation played a key role, due to the time-tested adage that Americans spend if they have a dependable source of income. In this case, the labor shortage not only provided that, but also helped to increase wages—particularly for those changing jobs—and reduce the size of inflation’s bite into paychecks.

The strength of the economy, once viewed skeptically by many in the financial sphere, began to convert skeptics into believers that the U.S. might not only avoid a recession, but also even a marked slowdown. This is the scenario that Powell had frequently mentioned as potentially achievable, though the longer the Fed leaves the target range as is, the greater the risk it will end up damaging the economy. For investors, the high rate environment contributed to the continued attractiveness of the preponderance of liquidity products across the industry, including money market funds remaining at historically elevated assets under management.

At the end of the quarter, yields on 1-, 3-, 6- and 12-month U.S. Treasuries were 5.36%, 5.36%, 5.33% and 5.03%, respectively; the 1-, 3-, 6- and 12-month Bloomberg Short-Term Bank Yield Index rates (BSBY) were 5.47%, 5.45%, 5.36% and 5.17%, respectively.

Susan Hill, CFA Fund Manager & Senior Vice President

Ratings from Leading Agencies

Ratings are based on an evaluation of several factors, including credit quality, diversification and maturity of assets in the portfolio, as well as management strength and operational capabilities. A money market fund rated AAAM by S&P Global Ratings is granted after evaluating a number of factors, including credit quality, market price, exposure and management. Money market funds rated Aaa-mf by Moody’s are judged to be of an investment quality similar to Aaa-rated fixed-income obligations, that is, they are judged to be of the best quality. Ratings are subject to change and do not remove market risk. For more information on credit ratings, visit standardandpoors.com and v3.moody.com. Credit ratings do not provide assurance against default or other loss of money and can change.

About Ave Maria and Federated Hermes Relationship

The Ave Maria Mutual Funds are managed by Schwartz Investment Counsel, Inc., a registered investment adviser who has been providing investment counsel to institutions and individuals since 1980 and today serves investors nationwide. Schwartz Investment Counsel, Inc. selected Federated Hermes Government Obligations Tax-Managed Fund for this program because its investments are congruent with the moral standards in place across the Ave Maria Fund Family. The money market fund is managed by a subsidiary of Federated Hermes, one of America’s largest and most respected money fund managers.

You could lose money by investing in the Fund. Although the Fund seeks to preserve the value of your investment at \$1.00 per share, it cannot guarantee it will do so. An investment in the Fund is not a bank account and is not insured or guaranteed by the Federal Deposit Insurance Company or any other government agency. The Fund’s sponsor is not required to reimburse the Fund for losses, and you should not expect that the sponsor will provide financial support to the Fund at any time, including during periods of market stress.

The fund has not elected to be subject to the liquidity fees at this time.

Income is subject to federal income tax.

Consult your tax advisor regarding the status of your account under state and local tax laws.

Net yields are based on the average daily income dividend and average net asset value for the 7 days ended on the date of calculation. The 7-day net annualized yield is based on the average net income per share for the 7 days ended on the date of calculation and the offering price on that date.

The fund is a managed portfolio and its holdings are subject to change.

The holdings percentages are based on net assets at the close of business on 6/30/23 and may not necessarily reflect adjustments that are routinely made when presenting net assets for formal financial statement purposes.

Fund shares are not guaranteed by the U.S. government.

Current and future portfolio holdings are subject to risk.

Weighted Average Maturity is the mean average of the periods of time remaining until the securities held in the fund’s portfolio (a) are scheduled to be repaid, (b) would be repaid upon a demand by the fund or (c) are scheduled to have their interest rate readjusted to reflect current market rates. Securities with adjustable rates payable upon demand are treated as maturing on the earlier of the two dates if their scheduled maturity is 397 days or less, and the later of the two dates if their scheduled maturity is more than 397 days. The mean is weighted based on the percentage of the amortized cost of the portfolio invested in each period.

Weighted Average Life is calculated in the same manner as the Weighted Average Maturity (WAM), but is based solely on the periods of time remaining until the securities held in the fund’s portfolio (a) are scheduled to be repaid or (b) would be repaid upon a demand by the fund without reference to when interest rates of securities within the fund are scheduled to be readjusted.
